

Fig. 1. East side of Wood Bay between Cape Auguste Viktoria and the Værdalen valley. Devonian sediments — to the left (N) Grey Hoek shale and sandstone, to the right Wood Bay sandstone — crowned by lavas (the high, white peak is Mt. Prisme fjell). G. Isachsen phot. Aug. 19. 1910. (From Isachsen).

Fig. 2. View from "Exile" towards the NE, E, and SE. The high mountains in the middle and right part of the picture are made up of Wood Bay sandstone as far up as the gentle slope goes; on top of that comes Cyathophyllum limestone. The mountain in the centre is Mt. Diadem. O. Holtedahll phot. July 10. 1910.
