SOME VASCULAR PLANTS  
FROM SOUTH EAST GREENLAND  
COLLECTED ON THE „HEIMEN“ EXPEDITION IN 1931  
PRELIMINARY REPORT

OSLO  
I KOMMISJON HOS JACOB DYBWAD  
1932

## Preface.

In the summer of 1931 *Norges Svalbard- og Ishavsundersøkelser* equipped a South-East-Greenland expedition, which left Svølvær in Norway on the 23rd of July 1931 in the M/S Heimen of Tromsø. The plan of the expedition was research work on a part of the east coast, south of Angmagsalik. The ship dropped anchor in Bjørnehamna in a fjord just north of Tingmiarmiut Island on the 1st of August. It left Finnsbu on the 30th of August, after 30 days' work ashore.

The Botanical work was chiefly done by the present author, but Professor Thorolf Vogt, the leader of the expedition, also collected some plants. In this preliminary report I have enumerated all plants not mentioned from this district in Professor Ostenfeld's paper 'The Flora of Greenland and Its Origin', Copenhagen 1926. A more comprehensive paper on the entire material is in preparation.

Our localities can be referred to four main regions, viz.:

- I. T i n g m i a r m i u t (abbrev. Tingm.): Igdlormiut, Lomvatnet and Langholmen.
- II. U m a n a k : Rudiøya, Vogtsbu and Pilerkit.
- III. A k o r n i n a r m i u t (abbrev. Akorn.): Bjørlykkeneset, Dronning Marie's dal, Moreneneset, Myrodden, Finnsbu, Imarsivik, Imarsivik-øya near Flosundet, the head of Trollfjorden, Trollfjordeidet, Eidsdalen and Kikut.
- IV. U m i v i k : Otto Sverdrupfjorden, Utermiut and Nordenskiöld's Nunatak.

I am much indebted to Dr. Hugo Dahlstedt, Stockholm, who has determined my *Taraxaca*, and to Mr. S. O. F. Omang, Oslo, who has determined my *Hieracia*. A special paper on the *Hieracia* is published in 'Skrifter om Svalbard og Ishavet', Nr. 45.

The Botanical Museum, Oslo, December 16th 1931.
